

MULTIDRAIN UV 300

SUBMERSIBLE DRAINAGE PUMPS

- High-quality stainless steel design
- 10 mm free passage
- Discharge vertical 1 1/2"
- Emerged operation due to motor jacket cooling (S1)
- Thermal motor protection
- Duplex mechanical seal
- Replaceable moisture sealed cable inlet

DESCRIPTION

The submersible drainage pumps Multidrain UV 300 can be used wherever there is dirty, rain, ground, seepage or drainage water with solids up to 10 mm. They can thus be used both in fixed installations in building drainage systems and in all transportable applications such as water extraction, emptying ponds or basins or, above all, in the removal of flooding inside and outside buildings.

The motor jacket cooling makes the pumps particularly suitable for emerged operation. A special thermal protection ensures that the pumps are not damaged even when running dry.

The pumps can be supplied either with or without a mounted submersible ball contact switch and 10 m cable.

Specifications can be changed without notice. Performance subject to ISO 9906 tolerances.

The minimum flow velocity in the pressure piping must be 0.7 m/s according to EN 12056. This data is represented in the performance curve as a limit of application.
